

Talk to your doctor about a lead test if you...

- renovated or remodeled a pre-1978 home; sanded and scraped paint
- have lead-risk hobbies, such as target shooting, casting fishing sinkers or bullets, stained glass making or pottery making
- have urges to and eat dirt, chalk, pottery, plaster, or paint chips
- recently moved to the United States from a foreign country
- someone you live with works with lead
- know your drinking water has lead
- use imported spices and Ayurvedic medicines
- live near lead mines, smelters, battery recycling facilities or other facilities that use lead
- have a history of lead levels of 5 micrograms per deciliter or above

Pregnant?

Tips to Protect Your New Baby from Lead

What you need to know:

Lead is a metal that can hurt pregnant women and their developing fetuses. It can damage the brain, kidneys, nerves, and other parts of the body. It can cause miscarriage, stillbirth or difficulty getting pregnant. Lead can affect children's behavior and make it harder for them to learn.

Lead can be stored in a woman's body for years, and then passed from mother to baby. A product can contain lead, even if it is not listed as an ingredient.

Some pregnant women have the urge to eat nonfood items. This behavior is called pica.

What you can do:

If you are pregnant or planning to become pregnant, ask your doctor about a blood lead test.

If you have ever had a blood lead test result of 5 micrograms per deciliter or above, your new baby should get a lead test before leaving the hospital.

Resist the urge to eat nonfood items. These items can contain lead:

Chalk

Dirt

Pottery

Avoid products imported from the Middle East, Latin America, South Asia, and China that may contain lead:

Spices, including turmeric.

Many types of **candy**.

Skin creams, including Yisaoguang Yaogua, Hondan and Thanaka.

Cosmetics like Kohl (also known as surma or kajal).

Lead-glazed pottery. Do not use for food preparation or serving.

Costume jewelry, including gold or silver plated.

Herbal and Ayurvedic medicines.
